Alphanomics - Charles Lee 2015-12-16

Alphanomics: The Informational Underpinnings of Market Efficiency is intended to be a compact introduction to academic research on market efficiency, behavioral finance, and fundamental analysis and is dedicated to the kind of decision-driven and prospectively-focused research that is much needed in a market constantly seeking to become more efficient. The authors refer to this type of research as Alphanomics, the informational economics behind market efficiency. Alpha refers to the abnormal returns, which provide the incentive for some subpopulation of investors to engage in information acquisition and costly arbitrage activities. Nomics refers to the economics of alpha extraction, which encompasses the costs and incentives of informational arbitrage as a sustainable business proposition. Some of the questions that are addressed include: why do we believe markets are efficient?; what problems have this belief engendered?; what factors can impede and/or facilitate market efficiency?; what roles do investor sentiment and costly arbitrage play in determining an equilibrium level of informational efficiency?; what is the essence of value investing?; how is it related to fundamental analysis (the study of historical financial data)?; and how might we distinguish between risk and mispricing based explanations for predictability patterns in returns? The first two sections review the evolution of academic thinking on market efficiency and introduce the noise trader model as a rational alternative. Section 3 surveys the literature on investor sentiment and its role as a source of both risks and returns. Section 4 discusses the role of fundamental analysis in value investing. Section 5 reviews the literature on limits to arbitrage, and section 6 discusses research methodology issues associated with the need to distinguish mispricing from risk.

Empirical Evidence on IPO-Underpricing - Marius Hamer 2008

Diploma Thesis from the year 2007 in the subject Business economics - Investment and Finance, grade: 1,3, European Business School - International University Schlo Reichartshausen Oestrich-Winkel, 80 entries in the bibliography, language: English, abstract: This paper aims at establishing a link between the average level of initial return of IPO shares, existing underpricing explanations and the dot-com bubble. In years prior to the boom of the new economy, underpricing was explained by various theories, which have extensively been developed since decades. However, in the years 1998 to 2001 IPOs were overly underpriced, leading to assumptions about behavioural aspects and investor irrationality. Analysing a comprehensive dataset of 371 IPOs on the Frankfurter B rse between 1997 and 2007, this paper aims at providing evidence that the observed lower levels of initial returns in recent years can indeed be aligned with existing theories on the basis of rational behaviour of market participants. Firstly, the IPO process and its major participants will be presented followed by a review of relevant studies on the IPO phenomenon. In the next step, established underpricing theories are recapitulated. A descriptive analysis of the data sample points out the particularities concerning the company and transaction characteristics of the sample firms. In a last step, a regression analysis relates various proxies for information asymmetry to established underpricing theories. It gives reason to believe that the irrationality at the turn of the century has vanished and that underpricing can again be explained by established theories.

Financial Management for Decision Makers - Peter Atrill 2019

The Handbook of Mergers and Acquisitions - David Faulkner 2012-06-07

With its inception at the end of the nineteenth century as a means of consolidation and reorganization, mergers and acquisitions (M&A) have since become quasi-institutionalized as one of the primary strategic options for organizations, as they seek to secure their position in an ever

more competitive and globalizing market place. Despite the optimism surrounding M&A as strategic moves, research on post-merger company performance suggests that most firms engaging in M&A activity do not achieve the sought-after performance targets, either immediately or in the years following the deal. What is it that drives M&A activity when research results do not support the performance expectations of these undertakings? Alternatively, have M&A scholars got it all wrong in the way that M&A performance is measured? Is the topic too complex, enduring, and multifaceted to study? The Handbook argues that the field of M&A is in need of a re-rooting: past research needs to be critically reviewed, and fundamental assumptions revisited. A key issue preventing efforts in the practice and study of M&A from achieving dynamic syntheses has been the disciplinary gulf separating strategy, finance, and human relations schools. The Handbook aims to bridge the hitherto separate disciplines engaged in the study and practice of M&A to provide more meaningful results. Toward this end, the Handbook brings together a set of prominent and emerging scholars and practitioners engaged in the study of M&A to provide thought-provoking, state of the art overviews of M&A through four specific 'lenses' - strategic, financial, socio-cultural, and sectorial approaches. By summarizing key findings in current research and exploring ways in which the differing approaches could and should be 'synthesized', it aims to highlight the key issues facing M&A practitioners and academics at the dawn of the third millennium.

Winning in Emerging Markets - Tarun Khanna 2010-04-28

The best way to select emerging markets to exploit is to evaluate their size or growth potential, right? Not according to Krishna Palepu and Tarun Khanna. In *Winning in Emerging Markets*, these leading scholars on the subject present a decidedly different framework for making this crucial choice. The authors argue that the primary exploitable characteristic of emerging markets is the lack of institutions (credit-card systems, intellectual-property adjudication, data research firms) that facilitate efficient business operations. While such "institutional voids" present challenges, they also provide major opportunities-for multinationals and local contenders. Palepu and Khanna provide a playbook for assessing emerging markets' potential and for crafting strategies for succeeding in those markets. They explain how to: · Spot institutional voids in developing economies, including in product, labor, and capital markets, as well as social and political systems · Identify opportunities to fill those voids; for example, by building or improving market institutions yourself · Exploit those opportunities through a rigorous five-phase process, including studying the market over time and acquiring new capabilities Packed with vivid examples and practical toolkits, *Winning in Emerging Markets* is a crucial resource for any company seeking to define and execute business strategy in developing economies.
