Cecilia Reclaimed - Susan C. Cook 1994

Cecilia, a fifteenth-century Christian martyr, has long been considered the patron saint of music. In this pathbreaking volume, ten of the best known scholars in the newly emerging field of feminist musicology explore both how gender has helped shape genres and works of music and how music has contributed to prevailing notions of gender. The musical subjects include concert music, both instrumental and vocal, and the vernacular genres of ballads, salon music, and contemporary African American rap. The essays raise issues not only of gender but also of race and class, moving among musical practices of the courtly ruling class and the elite discourse of the twentieth-century modernist movement to practices surrounding marginal girls in Renaissance Venice and the largely white middle-class experiences of magazine and balladry.

High, Wide and Frightened - Louise Thaden 2019-11-22

High, Wide and Frightened, first published in 1938, is pioneering aviator Louise Thaden's account of her adventures in the early days of flying. Thaden (1905-1979) earned her pilot's certificate in 1928 and would go on to win numerous long-distance air-races, and set numerous records for high-elevation and long-endurance flights. This edition includes the chapter entitled "Noble Experiment," (omitted from later reissues of the book), which describes Thaden's vision on the use of women in combat. In the final chapter of the book, Thaden describes her friendship with Amelia Earhart, who disappeared in 1937 over the Pacific Ocean.

The Web of Modularity - Ken Ono 2004

Modular forms appear in many ways in number theory. They play a central role in the theory of quadratic forms, in particular, as generating functions for the number of representations of integers by positive definite quadratic forms. They are also key players in the recent spectacular proof of Fermat's Last Theorem. Modular forms are at the center of an immense amount of current research activity. Also detailed in this volume are other roles that modular forms and q -series play in number theory, such as applications and connections to basic hypergeometric functions, Gaussian hypergeometric functions, super-congruences, Weierstrass points on modular curves, singular moduli, class numbers, L -values, and elliptic curves. The first three chapters provide some basic facts and results on modular forms, which set the stage for the advanced areas that are treated in the remainder of the book. Ono gives ample motivation on topics where modular forms play a role. Rather than cataloging all of the known results, he highlights those that give their flavor. At the end of most chapters, he gives open problems and questions. The book is an excellent resource for advanced graduate students and researchers interested in number theory.

Anthrozoology - Geoff Hosey 2018-11-30

Anthrozoology, the study of human-animal interactions (HAIs), has experienced substantial growth during the past 20 years and it is now timely to synthesise what we know from empirical evidence about our relationships with both domesticated and wild animals. Two principal points of focus have become apparent in much of this research. One is the realisation that the strength of these attachments not only

has emotional benefits for people, but confers health benefits as well, such that a whole area has opened up of using companion animals for therapeutic purposes. The other is the recognition that the interactions we have with animals have consequences for their welfare too, and thus impact on their quality of life. Consequently we now study HAIs in all scenarios in which animals come into contact with humans, whether as pets/companions, farm livestock, laboratory animals, animals in zoos, or in the wild. This topical area of study is of growing importance for animals in animal management, animal handling, animal welfare and applied ethology courses, and also for people within psychology, anthropology and human geography at both the undergraduate and postgraduate level. It will therefore be of interest to students, researchers, and animal managers across the whole spectrum of human-animal contact.

The Seventh Step - Bill Sands 2018-10-09
This book, which describes the author's one man crusade for a new penal rehabilitation program, known as The Seventh Step, takes you right into the drama of prison life. In 1963, Bill Sands, an ex convict, and the Reverend James Post formulated a self- help group in the Kansas State Prison. This first pre-release program adopted a slogan and guidelines that are the basis of The Seventh Step programs today. This was a danger-charged mission of an ex-inmate at San Quentin who crashed the Main Yard to prepare convicts for life in the "squarejohn" world—to

help them go outside—and stay out. Faced with the hopelessness of the men who had been paroled but not released because no one would hire them, getting the men to face themselves and the outside world realistically, knowing about the inmates' desire for revenge, all had to be channeled into an overwhelming desire for freedom. Their stories are fascinating and inspiring. Tremendously successful, the program reduced the number of men returning to prison for crimes committed after their release from 80% to 20% and spawned Seventh Step chapters across the United States. "a shocking chronicle of prison life . . . fascinating." —BIRMINGHAM NEWS "I think it is a great book and I found it full of inspiration." —NORMAN VINCENT PEALE

The Analytics Revolution in Higher Education - Jonathan S. Gagliardi 2018

Co-published with AIR. Co-published with ACE. In this era of "Big Data," institutions of higher education are challenged to make the most of the information they have to improve student learning outcomes, close equity gaps, keep costs down, and address the economic needs of the communities they serve at the local, regional, and national levels. This book helps readers understand and respond to this "analytics revolution," examining the evolving dynamics of the institutional research (IR) function, and the many audiences that institutional researchers need to serve. Internally, there is a growing need among senior leaders, administrators, faculty, advisors, and staff for decision analytics that help craft better resource strategies and bring greater efficiencies and return-on-investment for students and families. Externally, state legislators, the federal government, and philanthropies demand more forecasting and more evidence than ever before. These demands

require new and creative responses, as they are added to previous demands, rather than replacing them, nor do they come with additional resources to produce the analysis to make data into actionable improvements. Thus the IR function must become that of teacher, ensuring that data and analyses are accurate,

timely, accessible, and compelling, whether produced by an IR office or some other source. Despite formidable challenges, IR functions have begun to leverage big data and unlock the power of predictive tools and techniques, contributing to improved student outcomes.
